

# Crossroads Renewable Energy Project

Long County, Georgia

## KNOW THE FACTS

We are currently assessing the feasibility of a **150 MW solar project** in Long County, Georgia.

The Crossroads Renewable Energy Project is expected to create **188 full-time equivalent jobs** during construction.

Our solar projects are **safe and quiet**. Panels are secured to posts that are driven into the ground **without concrete**. This not only reduces impacts on the land but also makes for simple land restoration at the end of the project's life.

Solar projects provide **meaningful economic value** through tax revenue and job creation without a costly burden on public services and infrastructure (i.e., roads or water access).

When a solar project's life is complete, the project is removed, **the site is returned to its original condition**, and the majority of the **components are recycled**.

Thank you for supporting the BrightNight Crossroads Renewable Energy Project. You can count on us for **regular updates** via our newsletters, events, and website.

## Who Is BrightNight

- BrightNight is a U.S.-based, renewable power company working to provide clean power projects for a decarbonized energy future.
- Our experts have a long professional history, with over 10,000 megawatts of projects installed and operated successfully.
- As an independent power producer, BrightNight develops, owns, and operates its projects. Because of our long-term investment, we work to become a part of your community to support your region's growth and development goals over the life of our project.

The Crossroads Renewable Energy Project is expected to provide an estimated one-time pulse of economic activity to Long County during its construction phase supporting **\$1.7 million in associated wages** and benefits and **\$11.5 million in economic output**.

In addition to the jobs created during construction, we'll be hiring to fill **three to five long-term careers** in operations and maintenance.

The Crossroads Renewable Energy Project will feature a dual-use design, allowing for the continuation of on-site agricultural activities. This includes **building upon active apiary leases** to encourage important **pollinator activity in the area** in an effort to enhance the productivity of the site and neighboring land.

BrightNight develops projects to **minimize effects on natural and community resources** and works closely with federal, state, and local agencies that oversee these resources. **Stormwater drainage** on the Crossroads Renewable Energy Project will be designed in accordance with Long County, Georgia Environmental Protection Division and Soil and Water Conservation Commission requirements.
