

Biglow Renewable Power Project

KNOW THE FACTS

BrightNight is in the process of designing and developing a solar + storage project adjacent to the PGE Biglow Canyon Wind Farm. BrightNight is working with landowners, community members, and local leaders to **collaborate on the project's design and local direct benefits.**

Thank you for **supporting** the BrightNight Biglow Renewable Power Project. You can count on us for **regular updates** via our newsletters, events, and website

This project is expected to create approximately **250-300 jobs** during construction

Our solar projects are safe and quiet. Panels are secured to posts which are driven into the ground without concrete. **This not only reduces impacts to land but makes for simple land restoration at the end of the project life**

Solar projects provide **meaningful economic value** through tax revenue and job creation without a costly burden on public services and infrastructure (i.e., roads or water access)

When a solar project's life is complete, equipment is removed, **the majority of the components are recycled**, and the site is returned to its original condition

Who Is BrightNight

- BrightNight is a US based, renewable power company working to provide clean power projects for a decarbonized energy future.
- Our experts have a long professional history with more than 10,000 megawatts of projects installed and operated successfully.
- As an independent power producer, we work to become a part of your community so we can support your region's long-term goals over the life of our project.

The Biglow project is expected to generate **hundreds of millions of dollars in local tax revenue.** This is valuable regional revenue without a burden on local resources.

In addition to the jobs created during construction, we'll be hiring approximately **5 long-term careers** in project operations and maintenance

BrightNight works to include an agrivoltaic feature within each of its projects. The Biglow project is being evaluated for **sheep grazing, apiaries, and/or a pollinator habitat**

We are leading the industry with unique and collaborative site designs. At Biglow Project, we are incorporating passageways through the solar array to **allow for wildlife and game passage**

WE'RE ALWAYS HERE TO ANSWER YOUR QUESTIONS!
