

Supporting Arizona's Native Plant Species

BrightNight at work in our project communities

How we helped

Before construction began on the Box Canyon solar project in Pinal County, Arizona, BrightNight partnered with the Gold Canyon Master Gardener Club and the veteran-operated Natural Restorations to salvage native plant species. In coordination with the Master Gardeners, BrightNight safely removed about a dozen mature, healthy saguaros and transplanted them around the community, including trails, community centers, and a law enforcement office. Natural Restorations gathered ground cover plants and replanted them in burn-scarred areas of the region to support habitat restoration and protect against erosion. This proactive effort is a model of responsible renewable infrastructure development, demonstrating BrightNight's unique approach to community collaboration. By engaging local groups and prioritizing environmental stewardship, BrightNight showcases its commitment to sustainable and community-focused renewable energy projects.

Our Box Canyon community

BrightNight's work in the Box Canyon project community is a vital part of our mission to be a trusted and valued member of the community. Our impact is ongoing, as we strive to support local initiatives and foster strong community ties. In addition to salvaging and relocating native species, we have supported local college education funds, many area businesses, and contributed millions in critical tax revenue. This includes a significant contribution to the ASLD K-12 education trust. Through these efforts, BrightNight demonstrates its commitment to sustainable development and local enrichment in every community our project's call home.
